

Partner: Build Grounded AI Agents with Microsoft Foundry & Onelake

Ilias Jennane

Director Partner Technology Strategist - Microsoft

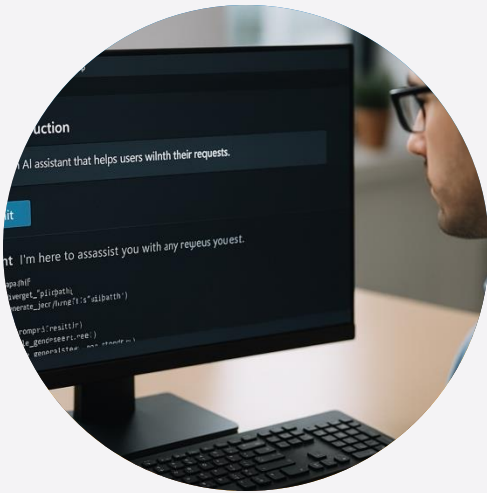

Agenda

-
- Evolution of Agentic AI
 - Unify Data with Microsoft Onelake
 - Build & Orchestrate with Microsoft Foundry
 - Responsible AI: Traceability & Governance

Evolution of Agentic AI

Agentic Development Evolution

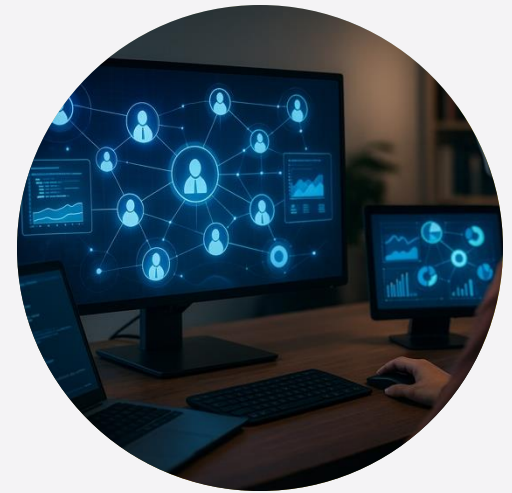

Prompt Engineering

Fine Tuning

Agentic Frameworks

Collaborative Agency

Agentic Development Evolution

Prompt Engineering 2021-22

- AI responded to phrasing — one prompt, one answer.
- Creativity unlocked but fragile and inconsistent.

Language became the user interface for intelligence

Fine-Tuning 2022-23

- Models connected to real enterprise data and APIs.
- Reasoning shifted from guessing to knowing.

AI started to reason with the world, not just about it

Agent Frameworks 2023-24

- AI learned to plan, reflect, and call tools in loops.
- We moved from giving instructions to defining goals.

Autonomy emerged from structure

Collaborative Agency 2024-25

- Specialized agents work together using shared context.
- Analyst, Curator, Sentinel—each role builds intelligence.

Teams of agents outperform single models

Getting started with multi agent product development

Unified Data for Collaborative Agents

1- Unify and reason over your data

Agents query live data from OneLake

2- Build intelligent Collaborative Agents

Agents analyze interactions and act with shared context

3-Extend intelligence with custom models

Integrate predictive, generative, or domain-specific ML

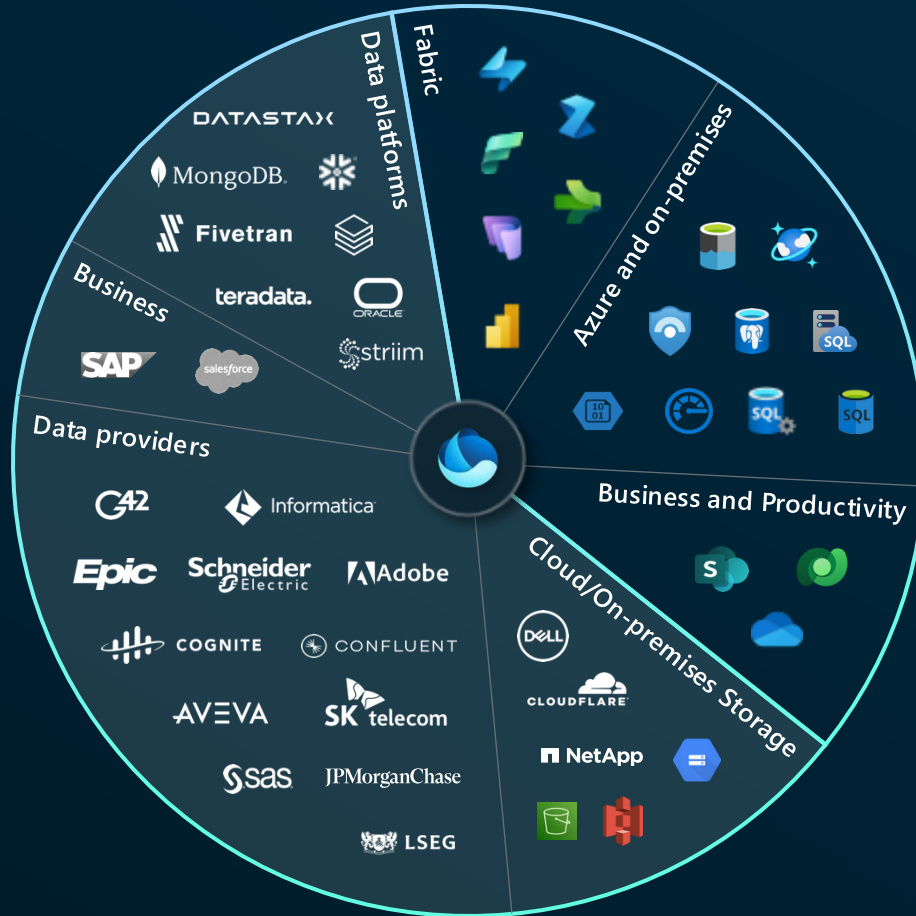

Together, OneLake and Foundry enable traceable, goal-driven AI agents—built for enterprise scale

1- Unify Data with Microsoft Onelake

OneLake unifies a complicated data landscape

All Fabric data is available in OneLake

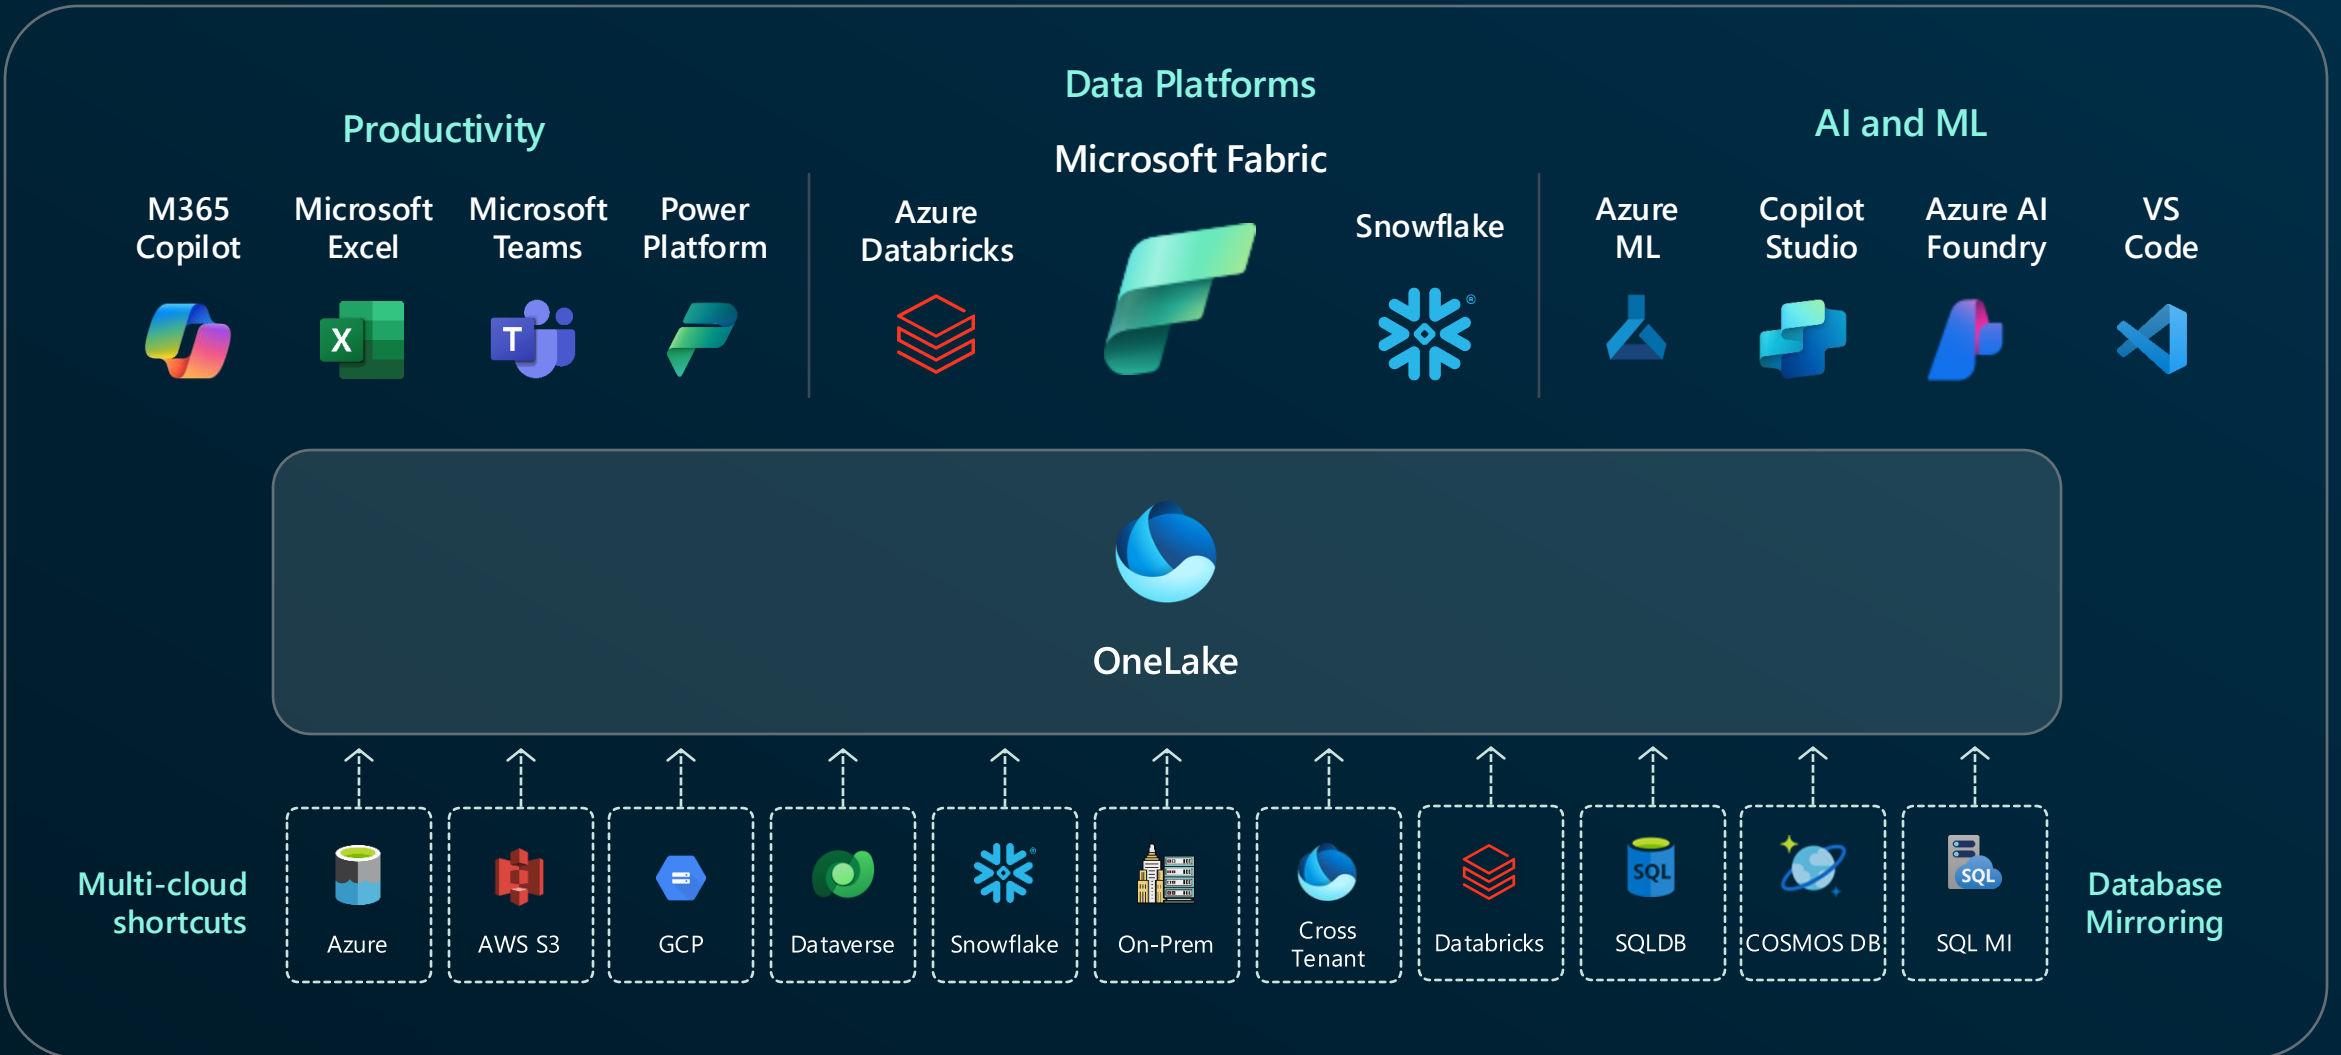

Microsoft data including Azure Data and Dynamics 365

Non-Microsoft data platforms and services

Data stored on-premises or cross cloud. In open or proprietary storage

Structured and unstructured data

OneLake data is available everywhere

Unify data in OneLake with zero ETL

Generally available

Azure SQL DB

Azure Data Lake store

Microsoft OneLake

Google Cloud Storage

Microsoft Dataverse

Snowflake

Snowflake

Amazon S3

S3 Compatible (cloud/On-prem)

Databricks Catalog

Azure SQL MI

Azure Blob storage

Public preview

Azure Cosmos DB

Azure PostgreSQL

Oracle DB

SQL Server

Google BigQuery

SQL Server 2025

Demo 1: Unify your data

Onelake for all your data

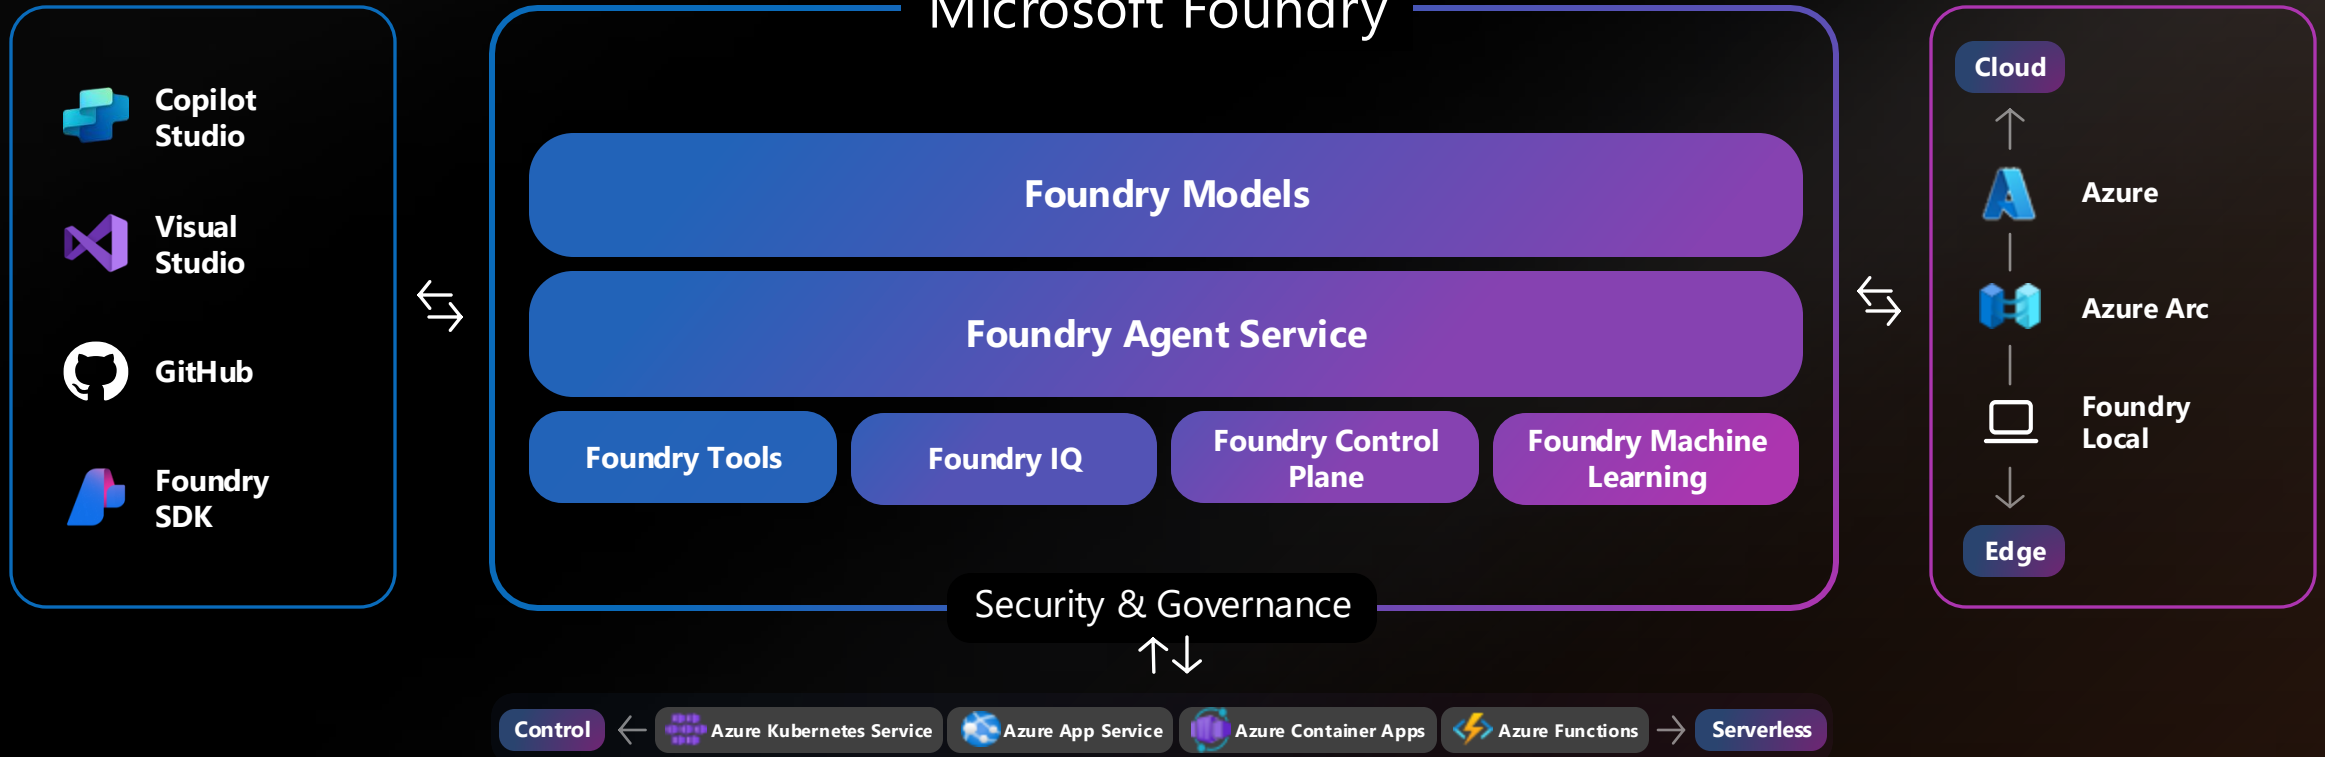

2- Build & Orchestrate with Microsoft Foundry

Microsoft Foundry

Demo 2: Realtime Agent Orchestration

Collaborative Agents in Microsoft Foundry

3- *Responsible AI: Governance & Guardrails*

Demo: Responsible AI

Evaluations, Guardrails and Safety
